

Re: Material Safety Data Sheet (MSDS)

Date: 6 July 2004

Tiger Claw fasteners do not require the publication of Material Safety Data Sheets according to OSHA's Hazard Communication Standards. Tiger Claw fasteners do not potentially release chemicals during normal use and are therefore considered "articles" under the Hazard Communication Standards. Under these standards, "articles" are exempt from hazard communication requirements, including the need for release of Material Safety Data Sheets. To clarify, the definition of "articles" provided in section 29 CFR 1910.1200 (c) of the Hazard Communication Standards may be found below.

"Article" means a manufactured item other than a fluid or particle: (i) which is formed to a specific shape or design during manufacture; (ii) which has end use function(s) dependent in whole or in part upon its shape or design during end use; and (iii) which under normal conditions of use does not release more than very small quantities, e.g., minute or trace amounts of a hazardous chemical (as determined under paragraph (d) of this section), and does not pose a physical hazard or health risk to employees. (29 CFR 1910.1200 (c))"
