# Mr. Richard Bergman

Topic: Testing of Post Anchor Assemblies

November 3, 2005

Purchase Order Number: VISA Auth# 081472

This report is subject to the following terms and conditions: 1. This report relates only to the specimen provided and there is no representation or warranty that it applies to similar substances or materials or the built which this specimen is a part of 2. The contents of this report is for the information of the customer identified above only and it shall not be represented or published in whole or in part or disclosed to any other party without prior consent of ACTLABS 3. The name ACTLABS Shall not be used in connection with the specimens reported or any substance or materials similar to that specimen without prior written consent of ACTLABS 3b. Any tests outsourced to an accretited subcontractor are identified abolews: (\*) 4. Neither ACTLABS or its menjoeses shall be responsible for any claims, loss or damages arising in consequence of reliance on this report or any error or omissions in its preparation or the test conducted 5. Specimens are retained for 90 days, test reports and test data are retained 10 years form date of final test report and then disposed of, unless instructed otherwise in writing. 6. Micrograph magnification based on a photo size of approximately 3.5\*x5\* unless otherwise noted. QA Forms Revision 4.1 Effective Date: October 17, 2005. Test Report Certified By:

### Laboratory No. M05-1100 Rev. 1.0

### **Introduction and Summary of Analysis**

Two prototype anchor post assemblies were submitted for testing to determine maximum horizontal loading strength. The anchor post assemblies were tested with a horizontal load application at a post height of 1070mm.

See Figures 1 to 6 for visual documentation.

#### **Results of Evaluation**

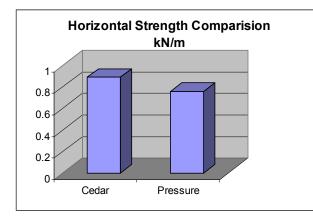

#### Cedar Post

The cedar post was subjected to horizontal static loading at a post height of 1070mm. The maximum recorded strength prior to failure was 0.89 kN/m. Failure occurred when the post split adjacent to the anchor, and the anchor fastening screws stripped from the post. Table 1 contains a comparative summary.

#### Pressure Treated Post

The pressure treated post was subjected to horizontal static loading at a post height of 1070mm. The maximum recorded strength prior to failure was 0.76 kN/m. Failure occurred when the post split adjacent to the anchor, and the anchor fastening screws stripped from the post. Table 1 contains a comparative summary.

#### Table 1 – Results of Load Testing

	Max Strength	Nature of Failure
Pressure Treated Post	0.76 kN/m	Post split adjacent to base, screws pulled from base
Cedar Post	0.89 kN/m	Post split adjacent to base, screws pulled from base
